

# Bailey & Mackey Ltd

Test accuracy Gauges are supplied to laboratory & inspection departments for the recalibration of industrial accuracy pressure equipment.

- 150mm Diameter
- Direct Mounting or Surface Mounting
- Accuracy +/- 0.25% FSD
- Mirror scale to reduce parallax errors
- Single or Dual Scale
- With Calibration Certificate.
- Ranges available from -1 up to 700 bar

The Mechanisms of our test gauges are specially built to a high standard and the dial of each gauge is individually calibrated against dead weight equipment which is traceable to national standards with UKAS certification.

A calibration certificate is supplied with each test gauge.

Test gauges have a greater number of marks on the dial compared to an industrial gauge and we recommend that the maximum is 200.
